MUHAMMAD SUBHAN

ASPIRING MACHINE LEARNING ENGINEER

Python • TensorFlow • CNN & Deep Learning • Predictive Analytics • Cloud Data Engineering

WhatsApp: 03272394072 | muhammadsubhan.tech0@gmail.com | Karachi Division, Sindh, Pakistan

LinkedIn • GitHub • Portfolio • Portfolio 2

PROFESSIONAL SUMMARY

AI and Cloud Data Engineering student focused on practical AI/ML solutions, computer vision, and data-driven applications. Skills and interests include Python, TensorFlow, deep learning, CNN-based image classification, predictive analytics, SQL, and cloud data engineering. Personal project work includes SAESS (Smart AI Emergency Surveillance System), a computer-vision surveillance concept for detecting road-safety violations and safety/security incidents.

TECHNICAL SKILLS

- Python
- TensorFlow
- Artificial Intelligence (AI)
- Machine Learning
- Deep Learning
- Convolutional Neural Networks (CNNs)
- Predictive Analytics
- Data Analysis
- SQL
- Cloud Data Engineering
- Google Cloud Dataflow
- AI Automation & Agentic AI

EXPERIENCE

AI/ML Developer — Personal Projects

August 2025 – Present

Developing personal machine-learning projects focused on deep learning, image classification, and predictive data analysis using Python and TensorFlow. Work includes exploring model-development and training workflows, evaluating model performance, and improving understanding of machine-learning concepts.

FEATURED PROJECT

CNN-Based Image Classification

- Built/explored a CNN model for image classification using Python and TensorFlow.
- Reviewed model development, training workflows, and performance evaluation.
- Reported project accuracy: 92% (as stated in the provided profile).
- Project focus: AI-assisted incident detection and traffic monitoring. Implementation details and measured performance should be added once verified.
- Road-safety detection features include wrong-way driving, riding without a helmet, and driving without a seat belt.
- Computer-vision surveillance project designed to detect car crashes, fires, and suspected robbery-related incidents.

SAESS — Smart AI Emergency Surveillance System

AREAS CURRENTLY EXPLORING

- Cloud data pipelines and cloud technologies
- Google Cloud Dataflow
- AI automation and Agentic AI

EDUCATION

Government National College — Intermediate, Computer Science (August 2026 – May 2028)

PROFESSIONAL INTERESTS

- Practical AI/ML applications
- Predictive data analysis
- Cloud data systems and data pipelines
- Connecting with AI/ML engineers, data professionals, and developers
